QuakeHold! announces major acquisition

For Immediate Release

Escondido, CA – (January 15, 2007) – QuakeHold! by Trevco, the worldwide leader in earthquake safety, has announced that it has acquired Fastening Solutions Inc., a pioneer in the field of industrial and commercial earthquake preparedness.

Fastening Solutions, based in Tarzana, California, has been in business since 1991 when it was commissioned by the United States Navy to design a product that would keep shipboard equipment secure during excessive movement or motion at sea. The product it developed was the precursor to the Thumb Lock, a fastening system that is now widely used to secure equipment in corporate, hospital, laboratory and school environments.

Fastening Solutions products are also used in the RV and marine industries.

“We are pleased to have added Fastening Solutions to our stable,” said Trevco president Dean Reese. “They are a respected business within the various industries that they have been serving, and we see their line of fasteners as being a good fit with our extensive range of earthquake safety products.”

“We have made our name primarily in the field of residential interior mitigation, so by acquiring Fastening Solutions we are now able to increase the number of industries that we serve. We have always taken pride in having top quality products and providing excellent service, and we are looking forward to extending those qualities to Fastening Solutions’ customers.”

QuakeHold! was established in 1991 and is the largest manufacturer of earthquake safety fasteners in the United States. QuakeHold!’s mission is to help prepare communities, because preparedness is the best defense against earthquakes.
